This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

Claims 1-26 (Canceled)

Claim 27 (Previously presented): A camera installation comprising:

a camera device capable of taking a photographic image data capturing an image over a field area of a size capable of containing at least one human individual;

an activation device for activating said camera device to capture a said photographic image data;

a user portable identification device carrying a unique identifier data for identifying a user of said camera installation;

a data entry device capable of receiving data identifying said user, and a users account data, the data entry device being provided in close physical proximity to said camera device; and

a user portable registration data storage device, configured for transmission of user registration data and account data to said data entry device;

wherein said data entry device is operable for collecting said registration data and said user account data in a single operation, and an action of said activation device activating said camera to capture an image automatically creates a contract for the supply of said image.

ŧ

 Claim 28 (Previously presented): The camera installation as claimed in claim 27, wherein said activation device is configured to automatically activate said camera on entering said field area.

Claim 29 (Previously presented): The camera installation as claimed in claim 27, wherein said activation device is operable by a user to activate said camera.

Claim 30 (Previously presented): The camera installation as claimed in claim 27, wherein said activation device is configured to store registration data describing personal details of said user.

Claim 31 (Previously presented): The camera installation as claimed in claim 27, wherein said activation device is configured to store user financial account data which is transferable to said data entry device.

Claim 32 (Previously presented): The camera installation as claimed in claim 27, wherein said activation device comprises a hand held computer entity.

Claim 33 (Previously presented): The camera installation as claimed in claim 27, wherein said identification device is passively interrogated to read said unique identifier data when in close physical proximity to said data entry device.

ı

Claim 34 (Previously presented): The camera installation as claimed in claim 27, wherein said registration data storage device is configured to store registration data describing personal details of said user.

Claim 35 (Previously presented): The camera installation as claimed in claim 27, wherein said registration data storage device is configured to store user financial account data, which can be transferred to said data entry device.

Claim 36 (Previously presented): The camera installation as claimed in claim 27, wherein said registration data storage device comprises a hand held computer entity.

Claim 37 (Previously presented): The camera installation as claimed in claim 27, wherein said data entry device comprises a radio receiver capable of receiving digital data uniquely identifying a user.

Claim 38 (Previously presented): The camera installation as claimed in claim 27 any one wherein said data entry device comprises a keypad having a plurality of alphanumeric keys, by which a user may enter text data by activating said alphanumeric keys.

Claim 39 (Previously presented): The camera installation as claimed claim 27, further comprising a visual display device, said visual display device displaying an operation menu, configured to prompt a user to understand operation of said camera installation.

24

Claim 40 (Previously presented): The camera installation as claimed in claim 27, wherein said camera installation is enclosed in a weather proof casing, for outdoor use.

Claim 41 (Previously presented): The camera installation as claimed in claim 27, comprising a self-supporting casing capable of free-standing installation.

Claim 42 (Previously presented): A photographic service system comprising:

at least one camera installation for capturing photographic digital image data in response to an input signal generated by a person; and

at least one service provider computer entity, configured to receive said image data from said camera installation, receive user registration data describing personal details of a user, and receive delivery address data specifying a delivery destination for delivery of a photographic product;

said camera installation comprising:

a camera capable of taking a photographic image data capturing an image over a field of view capable of containing at least one human individual;

at least one activation device for activating said camera to capture a said photographic image data;

a data entry device capable of receiving data identifying said user, and a users account data, the data entry device being provided in close physical proximity to said camera device;

a user portable registration data storage device configured for transmission of user registration data and account data to said data entry device; and

wherein said camera installation is operable for collecting said registration data and said user account data in a single operation; and

an action of activating said camera to capture an image automatically creates a contract for the supply of said image, by said at least one service provider computer entity.

Claim 43 (Previously presented): A photographic service system as claimed in claim 42, wherein said at least one service provider computer entity is configured to:

receive user account data describing financial account data of a user; and send said account data to a financial institution for effecting payment of a monetary amount from said user.

Claim 44 (Previously presented): A method of providing photographic images to a user specified destination, said method comprising:

capturing photographic digital image data in response to an input activation signal;

receiving a unique identifier data identifying a user of a camera installation; and

receiving user registration data describing personal details of a said user;
wherein an action of activating capture of an image automatically creates a
contract for the supply of said image.

21

22

23

24

25

Claim 45 (Previously presented): The method as claimed in claim 44, further comprising:

collecting electronic account data describing a financial account of said user person; and

using said electronic account data and electronic user registration data to collect payment for said supply of said image.

Claim 46 (Previously presented): The method as claimed in claim 44, further comprising:

collecting delivery destination data specifying a delivery destination of an image; and

delivering a said image to said destination specified by said delivery destination data.

Claim 47 (Previously presented): The method as claimed in claim 44, further comprising:

collecting delivery destination data specifying a delivery destination of an image; and

delivering an electronic image data file to a specified electronic said delivery destination.

Claim 48 (Previously presented): The method as claimed in claim 44, further comprising

collecting delivery destination data specifying a delivery destination of an image;

8

19

17

21

delivering a said image to said destination specified by said delivery destination data;

transmitting said photographic image data between first and second computer entities as electronic data;

at said second computer entity, converting said photographic image data into a physical photographic print; and

physically delivering said physical photographic print to a physical said delivery destination.

Claim 49 (Previously presented): The method as claimed in claim 44, further comprising:

sending said electronic account data describing an account details of a said user, to a third party computer entity; and

collecting a payment from said third party computer entity.

Claim 50 (Previously presented): The method as claimed in claim 44, wherein said photograph image data is generated in response to an input signal received in close physical proximity to a site of capture of said photograph image data.

Claim 51 (Previously presented): The method as claimed in claim 44, further comprising:

8

collecting electronic user registration data; collecting electronic account data, and collecting delivery destination data by:

7

19

23

21

transmitting said electronic user registration data, electronic account data and delivery destination data from a hand held computer entity device held by said user, to a camera installation comprising a camera which generates said photograph image data.

Claim 52 (Previously presented): The method as claimed in claim 44, wherein a said photographic image data comprises a sequence of video images.

Claim 53 (Previously presented): The method as claimed in claim 44, further comprising the processes of:

delivering a message contained in said message data, to a delivery destination, together with said image.

Claim 54 (Previously presented): The method as claimed in claim 44, further comprising the process of displaying a photographic image data on a web site.

Claim 55 (Previously presented): The method as claimed in claim 44, further comprising the process of:

displaying a photographic image data on a web site; and downloading a said photographic image from said web site to a remote computer entity.

Claim 56 (Previously presented): A camera installation comprising:

a camera capable of taking a photographic image data capturing an image over a field area of a size capable of containing at least one human individual;

an activation device for activating said camera device to capture a said photographic image data;

a user portable identification device carrying a unique identifier data for identifying said user; and

a data entry device capable of receiving data identifying a user of the camera installation, the data entry device being provided in close physical proximity to said camera device;

wherein said data entry device operates to receive an identification signal from said user portable identification device, uniquely identifying said user, and to determine whether an image of said user corresponding to said user identification data is instructed to be captured; and

if as a result of said determination, said image is instructed to be captured, said camera operates in response to said signal received from said activation device to capture an image of said person carrying said user portable identification device,

wherein activation of said camera to capture said image automatically creates a contract for the supply of said image.

Claim 57 (Previously presented): The camera installation as claimed in claim 56, wherein a hand held computer device transmits said user identification data to said data entry device.

1 |

ĺ

Claim 58 (Previously presented): The camera installation as claimed in claim 56, wherein said user identification data comprises data selected from the set:

user name; user address; user bank account details; physical delivery address for photograph images; and electronic delivery address for photograph images.

Claims 59-71 (Canceled)
